Email: ananyaanu151@gmail.com

Phone: +91 8499811978

Career Objective:

Motivated IT student passionate about building AI-driven solutions and web applications. Hands-on experience in DSA, machine learning, Django, Data analytics, and Java full-stack development. Actively pursuing AICTE certifications to enhance technical expertise. Eager to participate in innovative tech development programs, hackathons, and workshops with critical thinking to solve real-world problems.

Education:

Bachelor of Technology - Information Technology

2023 – 2027

Vignan's Institute of Engineering for Women.

CGPA: 8.73

Intermediate – MPC

2021 – 2023

Narayana Junior College

Percentage: 94%

Class X

2019 – 2020

Vishaka Vimala Vidyalayam

Percentage: 80%

Technical Skills:

- **Programming Languages** : C, Java, Python
 - **Frameworks** : Django
 - **Databases** : MySQL, Supabase
 - **Tools & platforms** : Canva, Git, Github
 - **Frontend Technologies** : HTML, CSS, JavaScript
-

Soft Skills:

- **Leadership** – Experience in coordinating events and leading a team with communication.
 - **Creative** – Innovative thinker in coding and solution development.
 - **Teamwork** – Ability to collaborate effectively in team projects and internships.
-

Internships:

- Designed a predictive plant disease detection AIML model
 - Managed databases using SQL for storing user data. Gained experience in Python, Deep learning, and CNN.
 - Hands-on experience with CNN, Productive work on AI fundamentals.
 - Working on predictive models on AI using Kaggle datasets.
-

Mini Projects:

1. SALT2SOURCE – Web Application

- Developed a digital platform that provides clean-water solutions to remote communities by using solar-powered desalination technology. The system also includes a water-source locator and greywater-recycling guides to promote sustainable water usage
- Worked in a team of 4, contributing to core feature development, UI flow design, and overall platform functionality to ensure a reliable and user-friendly experience.
- Tech Stack: HTML, CSS, JavaScript, React.

2. AI-BASED PLANT DISEASE DETECTION – Machine Learning Project

- Developed an intelligent plant disease detection system capable of identifying infections from leaf images using advanced computer vision and deep learning techniques. The model analyzes visual patterns, classifies diseases with high accuracy, and helps farmers take early action to reduce crop loss and improve yield.
 - Individually designed and implemented the entire project, including dataset preprocessing, model training, evaluation, and UI integration, ensuring a complete end-to-end solution.
 - **Tech Stack:** AIML, TensorFlow, Deep Learning
-

Certifications:

- Web Design for HTML and CSS
 - JAVA PROGRAMMING
 - C programming bootcamp
 - Python programming
-

More Than Academics:

- Assisted in managing and coordinating college events, ensuring smooth execution of technical and cultural programs.
 - Participated in hackathons, gaining hands-on experience in teamwork and innovative problem-solving.
 - Took part in various inter-college technical activities, including app design and other competitions.
 - Contributed to organizing and conducting multiple college-level competitions and student activities.
-

Personal Traits:

- Strong team player with excellent collaboration skills
- Quick learner with the ability to adapt to new tools and environments
- Detail-oriented and committed to delivering quality work
- Creative thinker with a problem-solving mindset
